Project Proposal Template

Project Title:
Spellaria

Project Gist / Summary:

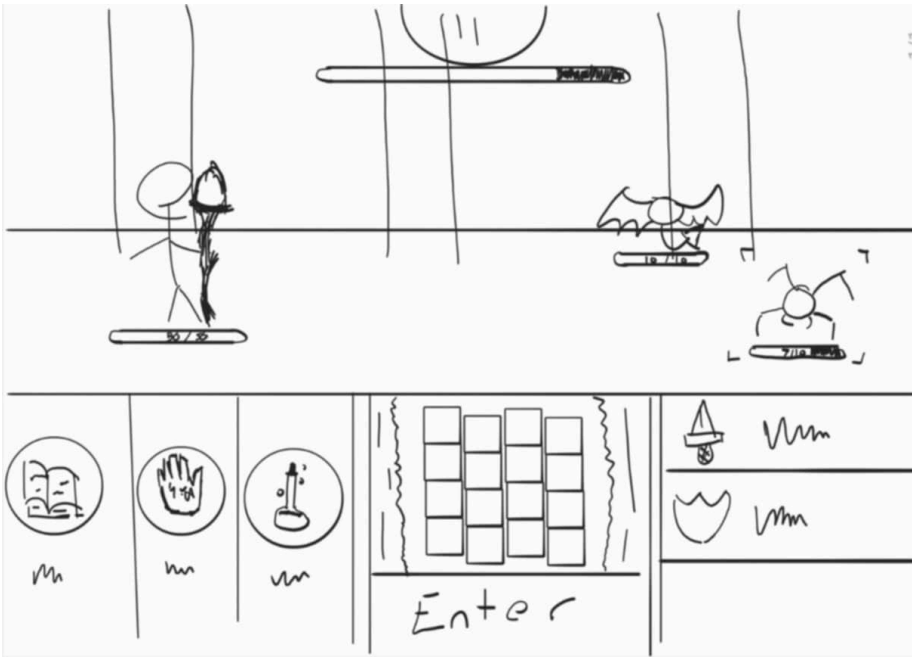

Spellaria is a turn-based strategy puzzle game in which players must spell words from a given set of letters in order to defeat their enemies in a limited amount of time. This game is highly inspired by the game Bookworm Adventures. The game challenges players to think critically by combining word-building with tactical decision-making.

This game utilizes OOP and Multithreading Java concepts demonstrated through the Game Handlers and UI handlers that encapsulate state and behavior for different game components, while multithreading is applied in a Master Dictionary file to load the dictionary in the background without freezing the UI.
